Introducing
Crypstone

Introduction

Crypstone is a company that was born out of innovation and the need to provide a better solution than what was available to people in the industry which it operates in. With so many bottle-necks and perfunctory solutions provided by the so called experts, Crypstone changed the game by developing better platforms that serves as solutions to the problems.

We seek to bring solutions to the challenges facing trading of Cryptocurrency into fiat, delays in international transactions and security of Crypto assets most especially in west Africa to the Continent of Africa at large and globally.

Simply term us a “Crypto bank”

We intend to spread across with the power of information and population in a great country such as Nigeria, where we believe the potential to reach that height is achievable.

Explaining
Blockchain/Crypto

Blockchain can be described as a data structure that holds transactional records and while ensuring security, transparency, and decentralization. You can also think of it as a chain or records stored in the forms of blocks which are controlled by no single authority. A blockchain is a distributed ledger that is completely open to any and everyone on the network. Once information is stored on a blockchain, it is extremely difficult to change or alter it.

Each transaction on a blockchain is secured with a digital signature that proves its authenticity.

Due to the use of encryption and digital signatures, the data stored on the blockchain is tamper-proof and cannot be changed.

A cryptocurrency is a digital or virtual currency designed to work as a medium of exchange. It uses cryptography to secure and verify transactions as well as to control the creation of new units.

Creating cryptocurrencies is one of the applications of Blockchain technology and other than Bitcoin, there are numerous applications that are being developed on the basis of the blockchain technology.

Problems

Inability to trade globally.

Complex and slow platform that makes it difficult for people to efficiently use the platforms.

The entities between e-commerce and users makes payment processing much more difficult.

Unavailability of a secured payment system that allows merchants accept digital currencies.

Inability to securely convert digital currencies like bitcoins to local currencies and fast.

Solution

Crypstone is solving the problems of associated with but not limited to:

Accepting payment globally.

Breaching the gap between that exist in the e-Commerce industry using digital currencies.

Creating better payment systems to enable merchants accept digital currencies.

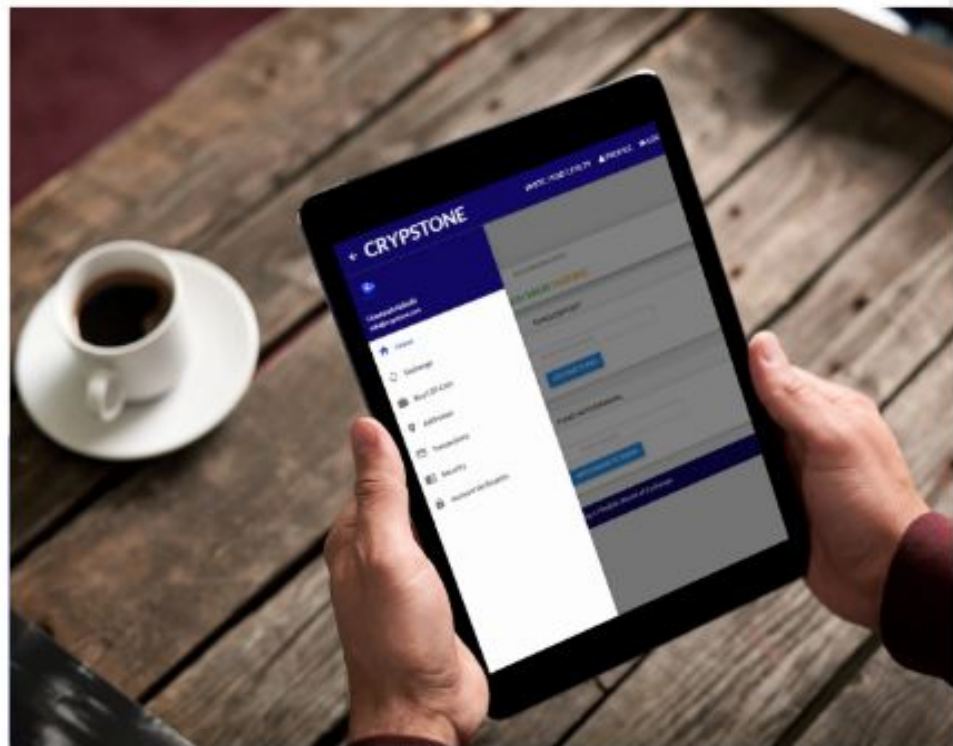

Making the adoption easier by creating simple and understandable and fast platforms that helps anyone to get involved with cryptocurrencies.

Creating a platform that securely allows anyone convert bitcoins to their local currencies.

Methodology

We are already solving these problems by first creating the Crystone wallet which currently hosts an average user base of 5000 making bitcoin transactions easy and fun. We are on the move to create our unique payment gateway and mobile app which would drive quick adoption.

About
CST token

CST token is a smart contract built on the Ethereum blockchain and can easily be traced publicly using its contract address

Token Information

COIN ALOGRITHIM	POS
COIN TICKER	CST
DECIMAL	8
INITIAL COIN PRICE	\$0.04
TOTAL COIN SUPPLY	800,000,000 CST
TOKEN TO SHAREHOLDERS	80,000,000 CST
RESERVE	100,000,000 CST

Why
CST
and its advantage to
Crypstone

We chose to use CST because of the needed funds to run a successful and effective global company, to do this we need a-lot of funds and do not want to restrict our fund raising locally, digital currency gives the avenue to raise funds without boundary policies and also enables those who believe in our project all around the world to own a share by purchasing our token.

CST token utility

CST is the cryptocurrency of the Cryptstone platform!!

The CST token will be used to pay for services on the Cryptstone platform such as its exchange, Cryptstone prepaid card etc

CST token will be used for purchase of items from merchants and partnered stores

CST will be used by crypto traders who capitalizes on fluctuation of its price/value to maximize profit

CST token staking makes the token highly demandable in market which in turn makes the token more valuable and traded on various exchanges.

Roadmap

1. The Exchange
2. Crypstone Payment API for online Merchants
3. Crypstone Payment Mechanism for offline merchants

The Crypstone wallet full version

1. Direct peer to peer transfer from bitcoin to user's local currencies from a bitcoin.
2. USSD transfer and SMS transfer of bitcoins
3. ATM card for Users

Crypstone
